                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence is a fragment of the adenovirus AFA hazon containing the HWRS loop. The invention relates to an adenovirus form which at least a part of the hezon HWRS or Hillowy is replaced with a Unding peptide, or targeting sequence, flanked by order in a which a Unding to functionally display its binding sequence, is conserved by the invention also relates to a recombinant adenovirus ventor where a binding peptide, or trageting sequence, is conserved to the leminus of the fiber by a connecting spacer, or linker, so as to functionally display its binding specificity at the despide surface. The adenovirus or recombinant adenovirus vector can be used to preferentially express a gene in a target cell, especially a cell that expresses a UPAR. The targeted adenovirus vector preferably comprises a hereloopous gene encoding a gene for treatment of a tumour or restensis. The targeted adenovirus vector is useful for gene therapy treatment of a disease, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for manufacturing a medicine used in gene therapy treatment of a disease. The viruses can also be used to inhibit smooth muscle cell proliferation, to treat peripheral artery diseases, cotomary artery diseases, obesity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neurodegenerative diseases, infections, autoimmune diseases, asthma, HIV, thrombosis, and diabetes. The viruses are particularly targetud against a urokinase-type plasminogen activator receptor (UPAR). The adenoviruses

Compositions which contain autoantigenic peptides binding specifically to T cells expressing acceptors containing the peptide sequences, which include antiger-specific immunological tolerance to rheumatoid arthritis can be used for the treatment and prevention of rheumatoid arthritis. The invertion can be used for the diagnosis, treatment and prevention of rheumatoid arthritis. Sequences ANY66959-977 represent peptides from the CDR3 region of various Wheta chains of T cell antigen receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T-cell antigen receptor V-beta chain CDR3 region seguences accumulated in synovial membranes of theumatoid arthritis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to peptide sequences present in the synovial fluand membranes of rheumatoid arthritis patients, arising from the CDR region of oligoclonal pathogenic T-cell antigen receptor Vbeta chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; breast cancer-associated gene; BCA-related disorder; lymphoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  င်
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human breast canner associated (RCA) genes and polypeptides. BCA sequences are useful for preventing or treating breast cancer. Other BCA-related disorders that may be treated include allergy, bone disease, eating disorder, infectious disease, ovarian cancer, prostate cancer, maignant tumours, sarcoma, Ewing's tumour, lenkaemia, lymphomas, or polycythaemia vera. BCA sequences are also useful in forensic hiology, disgrostic assays or pharmacognomics or for minitoring clinical trials. The invention is useful in gene therapy and as varcines. The present sequence is human BCA SH2-domain briding site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; beta amyloid precursor protein; beta AFF, Hiagnists; concert

This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegenerative disease, soperially disease, Down's syndrome, myotonic dystrophy, Huntington's disease, altoholistic to the case melitius type II multiple solerosis, alcoholistic liver disease, diabetes melitus type II and many others listed or susceptibility to these disorders. The method allows a definitive diagnosis of Alzheimer's disease in living patients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of meuromal system RNA molecules, specifically proceins including beta-amyloid precursor protein (beta-APP), the microtubule associated protein 2 (MAPP), the microtubule associated protein 2 (MAPP), inducibilament-1, neurofilament-1, neurofilament-1, neurofilament-1, presenilar tumour antigen p33, B cell leukemia/lymphoma 2 (bc1-2) prote oncogene, semanbornin III, HUPF-1, high mobility group protein-2 (HMSP C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human: P-glycoprotein, tryptic digest; proteolytic cleavage product; diabetes; Parkinson's diseate; Alzheimer's disease; malaria; cholera; human immunodeficiency virus infection; influenza; rabies; diphtheria; cancer, multi drug resistance; MDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treament and prevention with specific ribozymes or wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 5;

The many sing the PV according to one parameter defining a charteristic cach parameter, thus generating the set of AAS representative of (1).

Also included are (1) a computer readable storage media (1); comprising a database of amino acid dequences corresponding to the polypeptide of interest; (2) a system (11) for generating a database of amino acid sequences corresponding to a polypeptide of interest; complises a processing unit which executes a spplication configured for generating the number of protecty complises a processing unit which executes a spplication configured for generating the number of protecty complises a clasvage products according to one parameter defining a characteristic cleavage products according to one parameter defining a characteristic of amino acid sequence; (3) a kit for quantifying at least one populations, where the computational analysis of the polypeptide of interest and complex of protecting to information derived from computational analysis of the polypeptide of interest and contacting the computational analysis of the polypeptide of interest and at least one peptide of a number of peptides is generated according to information derived from computational analysis of the polypeptide of interest and contacting the computational sample, contacting the protection of analysis of the polypeptide of interest and at least one peptide of a number of peptides, and detecting presence, absence one peptide of a number of peptides, and detecting presence, absence one peptide of a number of peptides, and detecting presence, absence of and/or level of antibody binding to thus quantify one polypeptide of antibody energing one provide and or an analysis of the polypeptide of an antibody binding to thus quantify mentating at the polypeptide of an antibody and the contacting the polypeptide of an antibody and the contacting the polypeptide of an antibody binding to thus quantify.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to generating set of amino acid sequences (AAS) representative of one desired polypeptide (I), involving computationally generating a number of proteolytic cleavage products (PCP) from (I), analysing the PCP according to one parameter defining a characteristic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diphtheria, cancer (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Parkinson's disease, Alzheimer's disease, huran irranodeficiency virus infection, malaria, cholera, influenza, rabies, diphtheria, carcer (e.g. breast, colon, cervix, melanoma, lung, ovary, pancreus, prostate, lymphomas and leukaemias). The present sequence is a predicted tryptic peptide from human P-glycoptotein generated to form part of a kit for identifying multi-drug (MDR) resistance associated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                              by computationally generating protectytic cleavage products, analyzing and selecting the set of products, thus generating amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                 Generating amino acid sequences representative of desired polypeptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              least one attibody specific to a polypoptible of interest. The poptides or attibodies generated may be used to it whose diabotes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

This is one of 26 preferred epitopes which occur in a phosphorylated state in tau protein from Alzheimer paired helical filaments. The epitopes all include phosphorylatable serine residues in Ser-Pro motifs, 11e-Gly-Ser motifs or Cys-Gly-Ser motifs and/or phosphorylatable threonine residues in Thr-Pro motifs. The pattern of tau protein phosphorylation differs between Alzheimer's and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alzheimer's disease, Alzheimer; paired helical fragments; diagnosis;
treatment; formation; inhibition; inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   non-Alzheimer's individuals. Knowledge of the phosphorylated epitopes and antibodies which recognise them may be useful in diagnosis, treatment and prevention of Alzheimer's Disease. The protein Kinses present in mammalian brain which phosphorylate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence is that of an epitope of tau protein which specifically cours in a phosphorylated state in tau protein from Alzheimer's paired heliver's fragments. If any be used as part of a method for the in witro diagnosis and/or monitoring of Alzheimer disease it may also be used in an in vitro model for the study of the generation of the Alzheimer state of proteins and the testing of substances which prevent the conversion of formal to Alzheimer cau protein. This sequence represents an apoptotic protease activating factor-2 (Apaf-2) tryptic peptide which corresponds to residues 40-53 of human cytochrome. The invention relates to an in vitro model for change the regulation of apoptosis. Compositions are assayed in vitro for regulation of apoptosis. Compositions are assayed in vitro studying the regulation of apoptosis. Composition and a loop of supernatant extract (A) from cells, not committed to apoptosis, from a multicellular expensising (A) and a known inhibitor or known inducer of apoptosis, or a compound known to have no effect on apoptosis; (d) assessing either (i) activation of apoptosis from an increase in cytosolic cytochrome c, CPP12 protease activity or ability to fragment general in a civilation of apoptosis by a reduction in these quantities in a mixture containing a known inducer, relative to control without test compound. The test is performed on mammalian cells specifically Heid callolabelled polyidenosine diphosphate ribose) polymerase (PARP) or labelled sterol regulatory binding protein (SRBBP), and then detecting radiolabelled polyidenosine diphosphate ribose) polymerase (PARP) or labelled sterol regulatory binding protein (SRBBP), and then detecting intact mammalian cell nuclei, incubating, extracting genomic DNA and on the extract contains enough ATP and/or corresponding diphosphate (AADP) to allow induction of an apoptotic response. AATP and soluble cytochrome c are required for initiation of appropriation is required for initiation of another appropriation is effected to response. AATP and soluble cytochrome c are required for initiation of another appropriation of an apoptotic response. AATP and soluble responding diphosphate (AADP) to allow induction of an apoptotic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   identify cherotherapeutic agents that can induce apoptosis in tumour cells even when these express the Bcl-2 protein associated with resistance to chencherapy. Compounds identified this way may also (a) improve the effect of apoptosis inducing chemotherapeutic agents or (b) antagonise decayadenosine triphosphate (dATP) in the cytosol of patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                deficiency), as a potential treatment for this condition. Unlike known methods, this process does not use cells in which the apoptotic pathway has already been induced. i.e. it is not subject to interference from other apoptosis inducing factors or other conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
Cell-free assay to identify compositions that regulate apoptosis from their effect on e.g. cytosolic cytochrome clevels in cellular extracts, particularly to identify antitumour agents

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   study
properties. Forms voltage-dependent, ion-permeable channels in membranes. At high concentration causes cell membrane lysis.

-!- SUBURIT: Monomer. In aqueous solution exists as a tetramer.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE PARDAXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Litoria rubella (Desert tree frog).
Kakaryota: Metazoa, Chordata: Craniata; Vertebrata: Euteleosromi,
Amphibia: Batrachia; Anura; Neobatrachia; Eufonoidea; Hylidae,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     G
                                                                                                                                                                                         The present invention describes a peptide (I) comprising an isolated surface exposed group/epitope (E) of C-epsilon-2 domain (D) of immunoglobuline (Igb), or its minotope. Also described are: (1) an immunoglobuline (Igb), or its minotope. Also described are: (1) an immunoglobuline (Igb), or its minotope. Also described are: (1) an immunoglobuline (Igb) a pharmaceutical composition (PC) comprising (IUV), (C) a peptide (Ig) appared of baing recognised by (IVV) (B) an immunogen (IT) are appaide of baing recognised by (IVV); (B) an immunogen (IT) are an antial lergic and immunosiphorosive activities, and can be used as a vaccine and histamine release inhibitor. (C) (II) and (III) are useful in medicine and in the manufacture of medicaments for treating an area and aiso in manufacturing medicaments for treating allergies. (IV) is useful for identifying minotopes of PI, in medicine and aiso in manufacturing medicaments for treating allergies. (IV) is useful in diagnosing and in the affinity purification of circulating anti-IgE antibodies from blood. (I), (III) and PC are useful in diagnosing atopy. AARS2009 represent (IV) is also useful in diagnosing atopy. AARS2007 to AARS2099 represent

The present invention relates to inhage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the invention describes peptides derived from or mimotopes of the copsilon? Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protective antibody response in an animal or human patient. AAU16612-AAU36913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human igE.
                                                                                                                                                                                                                                                           A linkage comprising an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogen; human; IgE; immunoglobulin E; allergy; thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conjugate for use in vactine for treatment of allergy, comprises disulfide bridge cyclized peptide and immunogenic carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        o,

                                                                                                                                                                                                         ..
O
                                              where the conjugate comprises a disulphide bridge cyclised peptide and an immunogalnic carrier. The vaccines can be used in the treatment of allorgies. The present sequence is a peptide immunogal derived from human immunoglobulin E (IgE) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This neuroactive peptide can bind to a N methyl-L aspartate (NMDA) receptor and is included in a pharmaceutical composition comprising an effective NMDA receptor binding amount of a pulypetide. The products bind to the NMDA receptor at the glycine co-agonist site and effect at least the same biological activity from the NWDA receptor as the binding of glycine. They can be used as NMDA receptor agoists for echancing learning and memory. They can also be used for the isolation and characterisation of NMDA receptor activity, NMDA receptor tissue characterisation and correlation with disease, injury or other
                                The present invention relates to conjugates suitable for use in vaccines,
                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             endating reducing and memory at the glycine tinging site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for preventing and/or treating hypoxia, neuropathic pain or the effects of hypoxia on the central nervous system, or producing cognitive enhancement in a mammal. The method comprises administering: a composition containing neuroactive peptides (designated WIL) NT2, NT3, NT4, NT5, NT6, NT7 or NT8); or a compound that competes with NT8 for binding to the N-methyl-D-aspartate (NNDA). receptor. The method is useful for preventing and/or treating hypoxia, neuropathic pain or the effects of hypoxia on the central nervous system, in a mammal (particularly a human). The method is also useful for producing cognitive enhancement in a mammal. The invention is useful for producing cognitive present sequence is a neuroactive peptide.
                                                                                                                                                                                                                                                                                        Preventing or treating hypoxia or its effects on the central nervous system, or neuropathic pain in a human, by administering neuroactive peptides or compounds competing with the peptide for binding to N-methyl-D-aspartate receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

The products bind to the NMDA receptor at the glyone co-agonist site and effect at least the same biological activity from the NMDA receptor as the binding
                                                                               A new method is disclosed for diagnosing igA nephropathy by determining an antibody recognising the core peptide in the hinge region of ight contained in a liquid specimen, e.g. blood, serum, plasma, saliva or urine. The method is quick, convenient, safe and may be automated. Since there is no need for renal bloopsy, the partients suffer little mental stress, and there is no risk of perirenal bleeding. The present sequence represents a portion of the core peptide in the hinge region of ight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NMDA receptor; neuroactive; glycine co-agonist; learning; memory; N-methyi-D aspartate; pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This neuroactive peptide can bind to a N methyl E aspainate (MMDA) receptor and is included in a pharmaceutical composition comprising an effective NVDA receptor binding amount of a polypetide. The products bind to the NMDA receptor at the glycine co-agonist site and effect at least the same biological activity from the NMDA receptor as the binding of glycine. They can be used as NMDA receptor agonists for enhancing learning and memory. They can also be used for the isolation and characterisation of NMDA receptor activity, NMDA receptor tissue localisation and correlation with disease, injury or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                       Gaps
of glycine. They can be used as NWDA receptor agonists for enhancing learning and memory. They can also be used for the isolation and characterisation of NWDA receptor activity, NMDA receptor tissue localisation and correlation with disease, injusty or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New meuro-active polypeptide(s) for enhancing learning and memory have NMDA receptor agonist activity at the glycin- tinting site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes synthetic genes enouding plant guns and other hydroxyproline (Hyp)-rich giycoproteins (HRGPs) and the mucleic acids that encode them. The mucleic acids, proteins and methods from the present invention may be used to produce HRGPs, repetitive proline-rich proteins (RPRPs) and arabinogalactan-proteins (AGPs) in plants via recombinant methodologies. Also described is the expression of synthetic genes designed from repetitive peptide sequences, such as glycoproteins (including the peptide sequences of gunm arabic glycoprotein (AGP)).
                                                                                                                                                                                                                                                                     Plant; Gum arabic glycoprotein; GAGP; hydroxyproline-rich glycoprotein;

                                           Peptide is used in composition with peptide derived from p15 protein of HIV-1, HIV-2 or HTLV-1. Composition is useful in detection of human lymphotrophic retrovirus. Anti-idiotypic Abs and vaccines may be prepared, useful in modulation and immunisation against human lymphotrophic viruses.
                                                                                                                                                                                                                                                                                                                        Gaps
